

Roundup Ready® Herbicide with PLANTSHIELD® and Roundup Ready® PL Herbicide with PLANTSHIELD® use OTT in canola

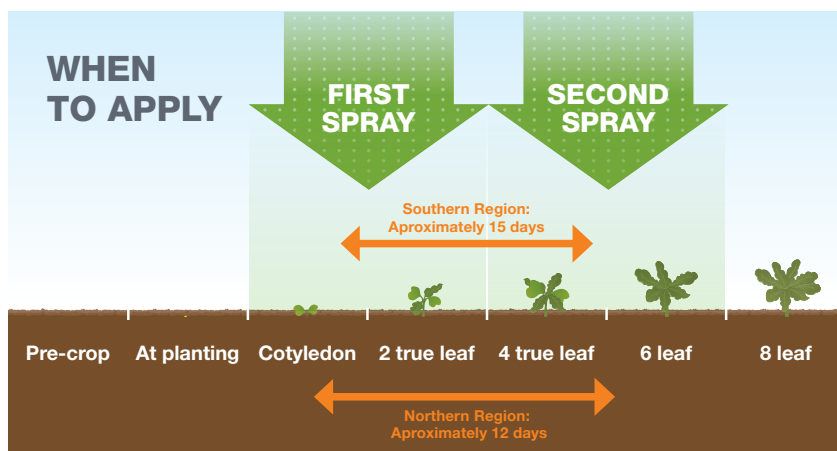

INFO SHEET

	Roundup Ready PL Herbicide with PLANTSHIELD	Roundup Ready Herbicide with PLANTSHIELD
Active	540 g/L Glyphosate	690 g/kg Glyphosate
Salt	Potassium salt	Mono-ammonium salt
Formulation	Liquid	Granule
Rate	1.15L/ha	0.9kg/ha

PLANTSHIELD crop safener technology minimises phototoxicity and allows for maximum efficacy and crop safety.

Roundup Ready® canola: Plan your spray

First spray:
Cotyledon to 2 leaf stage.

Second spray:
4 leaf to 6 leaf stage.

Leaf appearance in canola is temperature driven and requires 80 degree days/leaf (Phyllocron) this rate is variety specific and influenced by other factors (*International Plant Nutrition Institute, 2012*).

Sprays should be separated by approximately 14 days this will depend on temperature among other factors.

Region	May mean temperatures	Approximate time between applications	
Northern Regions WA	Min 11°C Max 24°C	12 days	Minimum temperatures of 11°C and maximums of 24°C plants will progress a leaf per 4 days. If your first application is at 2 leaf stage it will take approximately 12 days to reach 5 leaf stage.
Southern Regions WA	Min 10°C Max 20°C	15 days	Minimum temperatures of 10°C and maximums of 20°C plants will progress a leaf each 5 days. If first application is at 2 leaf stage it will take approximately 15 days to reach 5 leaf stage.

Source: Bureau of Meteorology, Leaf progression calculations based on data in "Canola Growth and Development" published by International Plant Institute, 2012

Before using the Roundup Ready Herbicides OTT on canola crops, users should consult the Roundup Ready canola resistance management plan (RMP) which has been developed to minimise the evolution of herbicide resistance in weed populations. All applications must be made according to label. Monsanto will not warrant the use of, and disclaims all responsibility for, any other glyphosate herbicide over the top of Roundup Ready canola crops.
